Subject: Action levels and alerts

Cecilia,

I have discussed the development of action levels for the Westlake air monitoring system with Mike Beringer. Before we can complete the development of response levels we need additional technical information for example the duration of monitoring (daily, weekly, monthly), the sensitivity of the measurement equipment, analytes, etc. This information is typically included in the sampling plan and QAPP. Also we need to discuss how the action levels will be used, i.e. what happens if an action level exceedance occurs.

We will schedule a meeting of the risk assessment team with appropriate members of your staff in the very near future to firm up some of these details. I would propose we add this item to our agenda for the update meeting with Karl and Mark on Friday, May 2.
